

# Exterior Finishes

## Exposed Aggregate

Natural stone finishes provide rich and attractive exterior surfaces. A wide variety of aggregate types and colors are available. Contact a Oldcastle Precast representative for samples of local and imported aggregate.

## Ribbed Pattern

Exterior surfaces with machine applied rib finishes are attractive and economical. Two rib patterns are available: Standard Rib (1" deep) and Random Rib (2" deep). Both finishes are mechanically rolled into the panel surface using a special proprietary method that results in a unique surface. The final appearance is uniform, while leaving the aggregate slightly exposed, resembling a porous material. Both finishes offer a rich exterior texture.

## Form Liners

An almost unlimited variety of attractive patterns, shapes and surface textures can be achieved by casting concrete against form liners. Rock, bricks, fractured fins, and ribs are just a few of the available finishes. Contact a Oldcastle Precast representative to discuss a form liner finish for your project.

## Textures

Lighter textures are achieved using a variety of methods. Sandblasting offers varying depths of aggregate exposure and a soft muted appearance. Acid etching gives the concrete surface a fine sand finish similar to natural sandstone. Broom finishes vary from light to coarse and give the surface a random granular texture. Raked surfaces offer the look of irregular roughened parallel lines.

## Color

White cement is used to provide the basis for a wide variety of colorful concrete surfaces. Color tones is achieved by mixing in selected colored aggregate and pigment. Contact a Oldcastle Precast representative can help you choose the most effective method to achieve a desired color for your project.

## Samples

Oldcastle Precast recommends custom made samples to define your desired concrete finish and color. Typical 12" x 12" x 2". Call us today to get started on your project.
